Education

UX Design / DevMountain / 2019
/ Learned principles to create engaging and delightful digital experiences

B.S. MET / BYU / Dec 2014
/ concentration in product design

Europe Study Abroad / 2013
/ Studied product design process at Ducati, Cinelli, and Nolan among others

Skills

Figma / Figma Make / Lovable
Tokens Studio / Storybook
Design Token Architecture
Component Documentation
Design-to-dev Handoff
Claude Code
Prompt-to-design Workflows
Github / HTML / CSS
Contextual Inquiry / Synthesis
Facilitation / Usability Testing
Information Architecture
Interaction Design
Visual Design / Data Visualization
Jira / Confluence

Experience

Product designer with 10+ years bridging engineering and UX — from hardware product design to enterprise B2B SaaS. I specialize in designing data-heavy interfaces for technical users, building scalable design systems from token architecture through component documentation, and working AI-native from day one using tools like Figma Make and Claude Code. My mechanical engineering background gives me genuine fluency with the engineers I design alongside and for.

Experience

Product Designer / Freelance / Jan 2019 - Present

/ Designed and iterated on a text-message-based payment tool for local service businesses, collaborating with a product manager and an engineer from Podium and MX. Developed a comprehensive two-tier design system in Figma, which included primitives and semantic tokens, along with Storybook component documentation.

/ Built a dual-screen financial transaction prototype using an AI-native workflow that integrated Figma Make for structure, Claude Code for variable binding, and Storybook for documentation. This approach significantly reduced the concept-to-handoff time.

/ Collaborated with a developer to design an eCommerce website from start to finish, which resulted in a tenfold increase in revenue for the client.

/ Created UI mockups and assets for a garden management app and successfully completed the handoff to an iOS developer within two weeks.

Product Designer / Medici Land Governance / Feb 2020 - Mar 2021

/ Led the end-to-end user experience design as the sole designer for a dual-interface land governance platform. This platform includes a mobile field tool for rural landowners and a web admin dashboard for government officials, serving users across Zambia in a high-stakes, data-sensitive environment.

/ Facilitated cross-cultural discovery workshops with internal stakeholders and government partners to uncover unmet needs and align on product direction, overcoming language and hierarchical barriers.

/ Contributed to the maturity of the design organization by publishing weekly design updates, organizing design jams, and introducing new workflow tools, which increased design visibility and encouraged cross-functional collaboration.

UX Instructor and PM / DevMountain / Nov 2019 - Feb 2020

/ Created a curriculum focused on UX research, human-centered design, Figma, and prototyping for a full-time design program.

/ Managed a cross-functional UX/iOS/QA team to successfully launch a complete iOS app.

Product Design Engineer / ClearStream / Sep 2017 - Nov 2018

/ Developed a modular design system for a 125-foot steel mechanism, which reduced design time, installation costs, and manufacturing costs.

/ Revised structural connections through engineering analysis, resulting in savings of over \$25,000.

Product Designer / Hall Labs / Sep 2015 - Dec 2018

/ Designed and prototyped several patented mechanisms; expanded the team through hiring and conducting weekly skills training.
